

Ride Matching App

Ride Matching Process

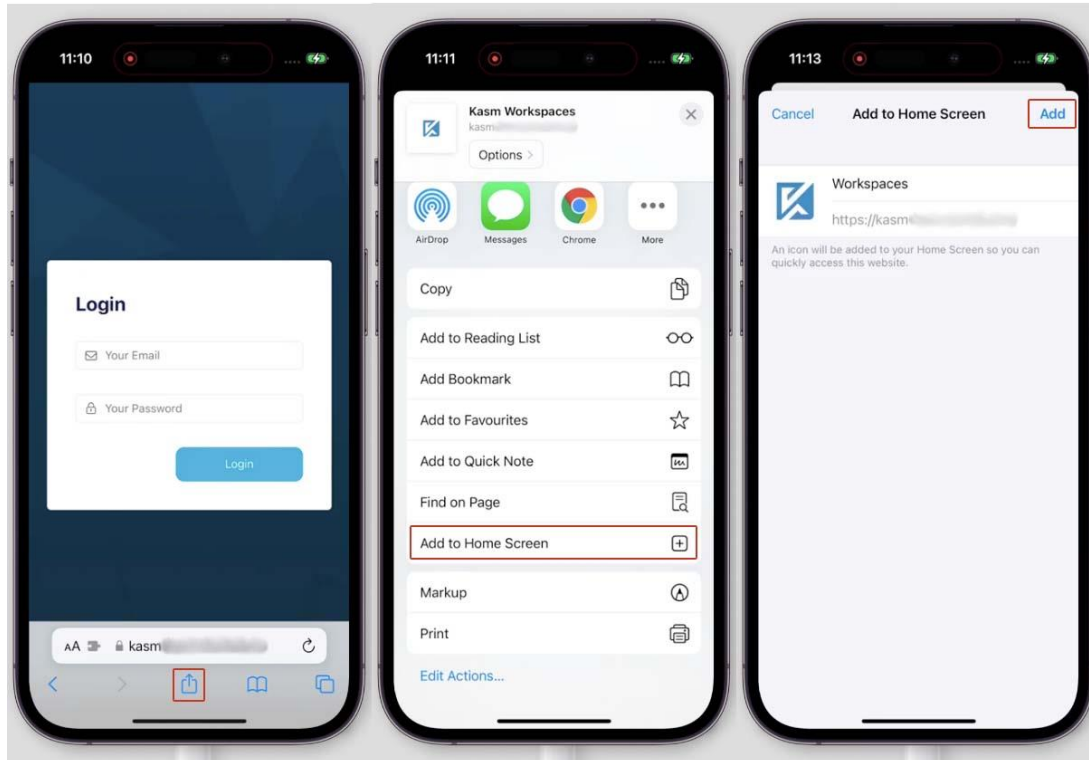

Ride Matching Process

Process	As-Is	To-Be
1. Ride Request & Confirmation	- The day before the English class, send text message to all students who need a ride - Manual process	- Automatically send text messages or push notifications at a set time - Students respond easily through a link provided in the web app or text
2. Response Collect & Database Update	- If no response via text, collect through a phone call - Update the student's status from "pending (response)" to "Looking (for a ride)" in the spreadsheet - Manual process	Responses are saved in the database in real-time, which will be used by the admin and matching system
3. Ride Matching	- Based on the number of students collected, manually match them with volunteers - Manual process	- Automated Matching Algorithm - Automatically match students and volunteers based on location, time, and capacity - Set priorities and constraints (e.g., prioritize matching with a specific volunteer) - Manual Adjustment Function - Admins can modify or manually adjust the matching results if necessary
4. Notifications and Communication		- Automatically notify students and volunteers once the match is complete - Send reminder notifications to prepare for the ride on the day of the class

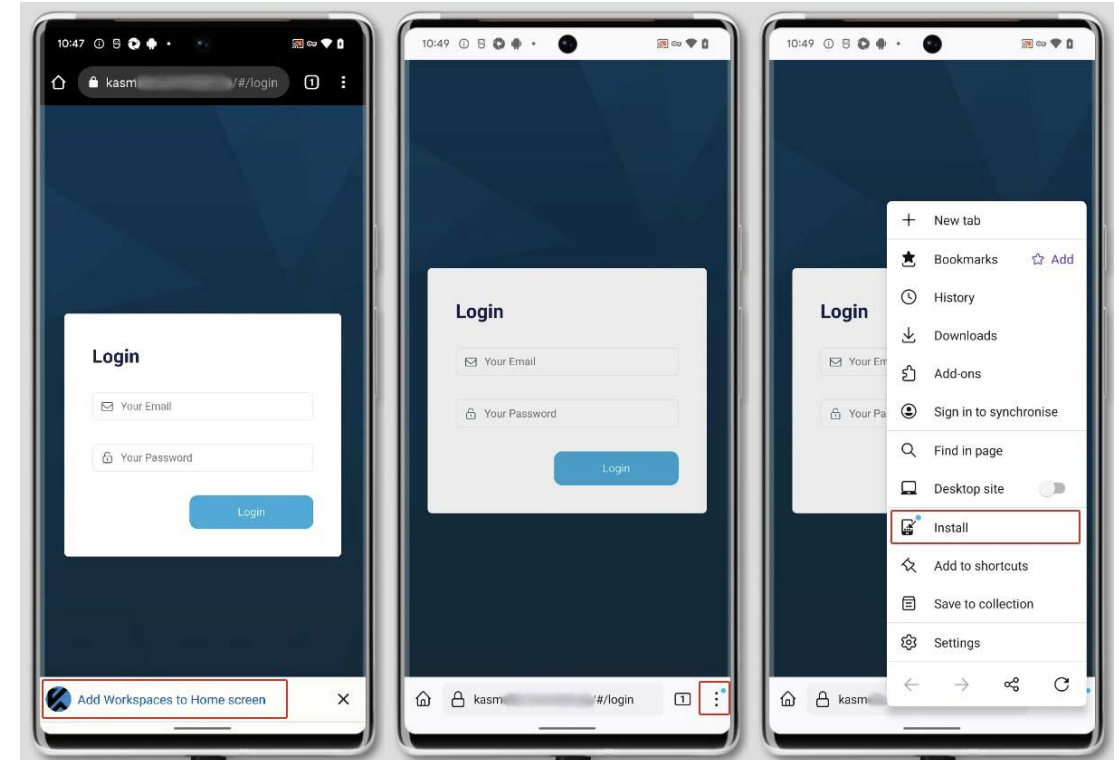

Type – Web App

- Initial Access via designated URL (First Time)
- Downloadable for Smartphones

○ iOS Example

○ Android Example

App System Structure by Key Function

Portal	Functions
Students	• Check ride request (For the English class) • Request ride for personal purpose • View schedule • News List • Personal Info: email, address, phone, number of person, etc.
Volunteers	• Profile Management ○ Volunteers can enter and update their available times, regions, and vehicle capacity • Schedule Management ○ Volunteers manage their availability in a calendar format
Admin	• Dashboard: An interface that provides a comprehensive view of all match statuses, schedules, and request history • Statistics and Reports: Offer statistics on service usage and volunteer activity • Settings Management: Allow changes to system settings such as automatic notification times and message content
